

S300

Benefits of Upgrading to the Newest Generation

Experience a new generation of voice conferencing

EACOME® now offers a suite of conference phones specifically designed for different types of rooms and network environments. These include:

- Conference phones designed to meet the acoustic requirements of different types of rooms, such as the EACOME® S350 solution for larger conference rooms, and EACOME® S300 phone for smaller meeting rooms and executive offices.
- Models designed for analog, PABX, and VoIP environments, with unique features that take advantage of the benefits provided by the different types of telephony environments, such as S3XX for analog, S310 for a PC and Laptop, IP6000 for VoIP environment.
- The IP3000 conference phone for the broadest telephony platform and room-coverage options-including both analog and IP connectivity to deliver unbeatable investment protection.
- The S350 conference phone dedicated the most values for both analog and USB connectivity to deliver unbeatable investment protection.
- The S310 conference phone designed to enhance audio quality for video conference with USB or Line in/out connection.

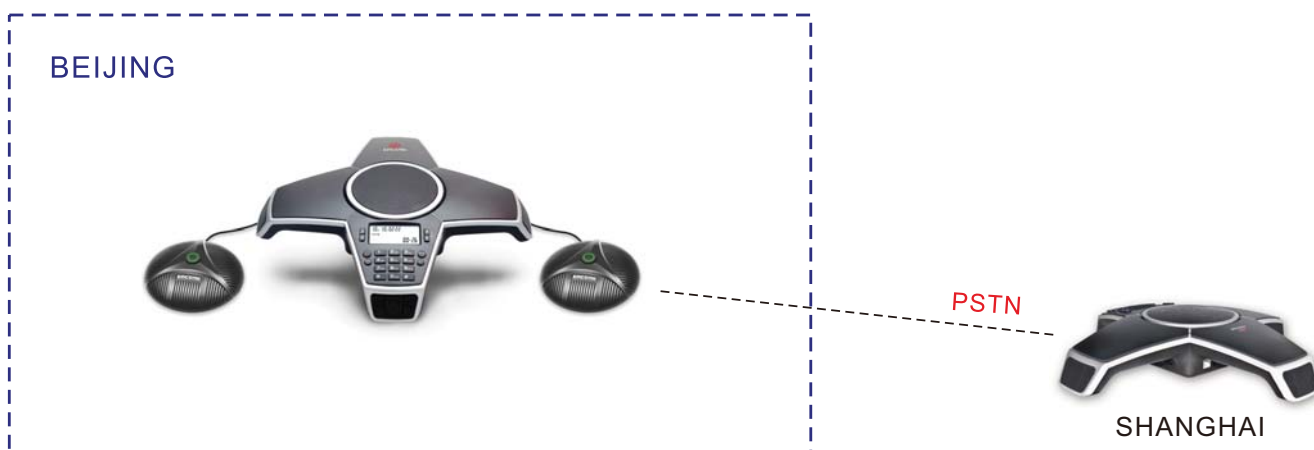

Benefits

- **Create a more realistic experience**, with select models using EACOME® HD- Voice technology SonicClear to capture both the deeper lows and higher frequencies of the human voice, resulting in conference calls that sound as natural as being there
- **Extend the microphone range**, ensuring that everyone in the room is heard loud and clear on the other end of the call
- **Actively remove background noise**, emanating from sources such as projectors and ventilation systems
- **Highlight the person speaking**, using smart microphones that focus on the speaker—not the distracting ambient sounds
- **Resist interference from mobile phones**, and other wireless devices, to deliver clear communications with no distractions
- **Make users more productive immediately**, because all EACOME conference phones share the same, proven ease of use

S300 HD-Voice Conference Phone with PSTN

S300 Solutions Applications

Feature Highlights:

- Wide-band acoustic echo cancellation with HD-voice , dynamic noise suppression, automatic gain control, voice band equalization and intelligent microphone mixing
- Best for the conference room within 20-60m² and supports 15 attendees
- 4 internal uni-directional microphones gather cover 3m
- 2 external microphones gather cover 5m
- Speaker volume up to 90dB, 12 levels adjustable
